Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached

(C to the N-terminus of the peptide, or a side chain of the peptide where

(C to the N-terminus of the peptide, or a side chain of the peptide where

(C when the R-X group of the side chain is NH2 or NH or X = O or NH,

(C side chain of the peptide, where the side chain functional group is COOH

(C or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

(C or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

(C or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

(C or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

(C or CONH2; and R = 1-5C straight or branched chain

(C or CONH2; and R = 1-5C straight or branched chain

(C or Expression of the conjugate. The peptides represent examples

(C of a Bcl-2 superfamily polypeptide conresponding to amino acids 72-97 of

(C of a Bcl-2 superfamily polypeptide conresponding to amino acids 72-97 of

(C of a Bcl-2 superfamily polypeptide conresponding to amino acids 72-97 of

(C of a Bcl-2 superfamily polypeptide conresponding to amino acids 72-97 of

(C of a Bcl-2 superfamily polypeptide conjugate is useful for treating a

(C subject afflicted with a cancer cells. It is also useful for inhibiting Bcl-2

(C consenses Bcl-2. The cancer includes prosterized by cancer cells that

(C express Bcl-2. The cancer includes prosterized by cancer cells that

(C consenses Bcl-2. The cancer includes prosterized by cancer cells in a cancer consense includes prosterized by cancer cells in a conjugate is also useful for treating disorders characterized by

(UYJE-) UNIV JEFFERSON THOMAS

```
The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached

to the N-terminus of the peptide, or a side chain of the peptide where

the functional group of the side chain is NHZ or OH; or X = O or NH,

when the R-X group is attached to the C-terminus of the peptide, or a

side chain of the peptide, where the side chain functional group is COOH

cor CONHZ; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally

cor two double peptide or also the peptides represent examples

cor the peptide portion of the conjugate is represent analogues

cof a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of

the BH3 domain of the cell death agonist Bad. The peptide conjugate is

conserved bonds apoptosis in the cells of a subject, or for

reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of

reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of

creversing b cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of

corresponds in cancer cells. It is also useful for inhibiting acids

corresponds acids and correct characterized by cancer cells that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             express Bcl-2. The cancer includes prostate, colorectal, gastric, non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma;
                                                                                                 New peptide conjugates for modulating apoptosis or for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                      cell'lymphoma/leukemia 2 (Bcl-2) function, especially useful for
treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT
 QΣ
                                                                                                                                                                                                                                                The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is MH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain functional group is considered to the C-terminus of the peptide, where the side chain functional group is COH or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally one crowdistituted with a 1-5c straight or branched chain alkyl group, or benzyl. The peptides AAB37001-B37058 represent examples of the peptide portion of the conjugate. The peptides represent analogues of the peptide portion of the conjugate. The peptide conjugate is alkyl group, or benzyl. The peptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of subject afflicted with a cancer characterized by cancer cells that cancer characterized by cancer cells that cancer includes prostate, colorectal, gastric, non-small lung, remain or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders acquired increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                õ

The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C-0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is MH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is considered to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COCH or two double bonds, cyclobutyl, cyclopentyl, cyclopentyl cyclopentyl cyclopentyl cyclopentyl cyclopentyl cyclopentyl cyclopentyl cyclopentyl cyclopentyl cyclopentyl, cyclopentyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AAB37001-B37058 represent examples of the peptide pertion of the conjugate. The peptides represent analogues of the BH3 domain of the coll death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (BCl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bol-2 conversing B cell lymphoma/leukemia 2 (BCl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bol-2 conversing a subject afflicted with a cancer characterized by cancer cells that cancer includes prostate, colorectal, gastric, acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders characterized by cancer cells conjugate is conjugate is also useful for treating conjugate conjugate is characterized by cancer colorectal, gastric, colorectal, gastric, acute conjugate is conjugate is characterized by cancer colorectal, gastric, acute conjugate is also useful for treating conjugate conju
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                      New peptide conjugates for modulating apoptosis or for inhibiting B cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached

to the N-terminus of the peptide, or a side chain of the peptide where

to the N-terminus of the spetide, or a side chain of the peptide where

the functional group of the side chain is NH3 or OH; or X = O or NH,

when the R-X group is attached to the C-terminus of the peptide, or a

side chain of the peptide, where the side chain functional group is COH

cor CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally

cor CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

cor two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally

cor consistinted with a 1-5C straight or branched chain alkyl group,

phenyl optionally monosubstituted with a 1-5C straight or branched chain

alkyl group, or benzyl. The peptides ABB37001-B37058 represent examples

cof a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of

the BH3 domain of the cell death agonist Bad. The peptide conjugate is

cof a Bcl-2 superfamily polypeptide conjugate is useful for freating a

corresponding to modulating apoptosis in the cells of a subject, or for

corpusing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of

subject afflicted with a cancer characterized by cancer cells that

corpuses Bcl-2. The cancer includes prostate, colorectal, gastric,

conjugate is also useful for treating disorders characterized by

increased apoptosis, e.g. neurodegenerative disorders, acquired

immunodeficiency syndrome (AlDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAB70370;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 6
```

```
The present invention describes an isolated or synthetic polypeptide

(1) comprising a less than full length amino acid sequence of a mutant

Bel-XL/Ed-2 associated cell death regulator polypeptide (BAD) or its

fragment, which contains amino acid substitutions at Seril8 of a human

BAD, SeriS5 of a murine BAD. (1) has immunostimulant, neuroprotective,

BAD (shorter murine BAD). (1) has immunostimulant, neuroprotective,

nootropic, antiischeamic, vulnerary, cytostatic, antiviral,

antiarthritic, antiinflammatory and immunosuppressive activities, and

can be used as an apoptosis inducer or inhibitor. BAD polypeptides and

polynuclectides can be used for screening candidate compounds and drugs

for activity that promote cell survival or apoptosis. Other uses include

inducing or inhibiting apoptosis in a cell. Candidate compounds

identified and (mutant) BAD polypeptides are useful in treating

immunodeficiency diseases, neurodegenerative diseases, ischemmic cell

death, reperfusion cell death, wound healing, cancer, viral infections,

lymphoproliferative conditions, arthritis, infertility inflammation and

caltoimmune diseases. The present sequence represents a specifically

calaimed shorter murine BAD mutant amino acid sequence from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Epitope; murine; bcl-x(L)/bcl-2 associated death promoter; Bad; stroke; polypeptide; bcl-x; cell death; regulate; BH1; BH2; apoptotic cell death; cytokine deprivation; IL-3 dependent cell line; immunodeficiency; AIDS; neurodegenerative disease; senescence; ischaemia; neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New mutant Bol-XL/Bol-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Serl18, Serl55 or

The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence is the murine BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, ancest inflammation and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as ALDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated and non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Murine, mouse, BCL-XL/BCL-2 associated cell death regulator; BAD protein, serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        phosphorylated BAD, by usual immunoassays. Wutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with Ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                         New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mutant BCL-XL/BCL-2 associated cell death regulator #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      140 NIWAAQRYGRELRRMSDEFEGSFKGL 165

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the murine bcl-x(L)/bcl-2 associated death promoter (Bad) gene. Bad is a 22.1 kD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-related family clustered in the BH1 and BH2 domain. Bad has been found to hybridise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of bcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-2. Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expressing bcl-x(L), and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-x(L) or bcl-x(L) to form heterodimers. Such agents may be used to treat neurodegenerative diseases, immunodeficiency diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                QΣ
                                                                                                                                                                                                                                                                                                                                                            The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, cancer, viral infection, lymphoproliferation, arthritis, infertility, infammation and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, eletermined by measuring relative amounts of phosphorylated and nongetermined by measuring relative amounts of phosphorylated and nongetermined by measuring relative amounts of phosphorylated each-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forning a product that does not proteins in the cytosol, thus promoting cell survival. The mutants with the ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis. e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, infertility, infertility, arthritis, infertility, infertility, infertility, and autoimmune disease. Polynucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers or intraatment of excessive apoptosis such as AIDS, neurodegeneration, attended and intraatment of excessive apoptosis such as AIDS, neurodegeneration, appropriated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated cannot bind 14-3-3 family by substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \nabla
                                                                                                                                                                                                                                                          death regulator) proteins, having an amino acid other than Ser at death regulator) proteins, having an amino acid other than Ser at death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, inflammation and autoimmune disease. Polynucleotide sequences encoding untant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, a ding or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL bit instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with conservative cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                       The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an aming and all constants.

This sequence represents a novel serine-phosphorylated protein, BAD

(Bc1-X1/Bc1-2 associated cell death regulator). The serine residue is
phosporylated in a post-translational modification and allows binding

to the 14-3-3 protein which is a signal transduction regulator.

Modulators of phosphorylated BAD, which act through inhibition/activation

of a phosphoserine phosphatase, are useful for preventing/tracting

Increased/decreased apoptosis. In a cell. The increased apoptosis may

result from immunodeficiency diseases, senescence, neurodegenerative

disease, ischaemic cell death, reperfusion cell death, infertility and

wound-healing. Decreased apoptosis may result from cancer, viral

infection, lymphoproliferative conditions, arthritis, infertility,

inflammation and autoimmune diseases. Measuring the amount of

phosphorylated compared to unphosphorylated BAD polypeptide and/or total

C. BAD in a cell is useful for determining the apoptotic state of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunostimulant; neuroprotective; nootropic; antischaemic; vulnerary; cytostatic; antiviral; antiarthritic; antinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; ischaemic cell death; reperfusion cell death; arthritis; infection; lymphoproliferative condition; inflammation; autoimmune disease.

                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated or synthetic polypeptide

(I) comprising a less than full length amino acid sequence of a mutant

Bel-XL/Bcl-2 associated cell death regulator polypeptide (BAD) or its

fragment, which contains amino acid substitutions at Serl18 of a human

EAD, Ser155 of a murine BAD). (I) has immunostimulant, neuroprotective,

BAD (shorter murine BAD). (I) has immunostimulant, neuroprotective,

nootropic, antisofhemmic, vulnerary, cytostatic, antiviral,

antiarthritic, antiniflammatory and immunosuppressive activities, and

can be used as an apoptosis inducer or inhibitor. BAD polypeptides and

polynucleotides can be used for screening candidate compounds and drugs

for activity that promote cell survival or apoptosis. Other uses include

inducing or inhibiting apoptosis in a cell. Candidate compounds

ideath, ineperfusion cell death, wound healing, cancer, viral infections,

lymphoproliferative conditions, arthritis, infertility, inflammation and

cutoimmune diseases. The present sequence represents a specifically

claimed longer murine BAD mutant amino acid sequence from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                          The present invention describes a method (M1) for inducing apoptosis in a cell infected with herpes simplex virus (HSV), which comprises administering to the cell, a composition having an agent that inhibits phosphorylation of pro-apoptotic polypeptide BAD by HSV US3. Also described is a method (M2) for treating a patient infected with HSV, by administering to the patient, a composition comprising a peptide comprising a sequence of 4-100 continuous amino acids of a 168 residue amino acid sequence (see ABR39081), where the peptide comprises seril2, seril5, or seril5, or their combinations. BAD has viruide activity. M1 is useful for inducing apoptosis in a cell infected with HSV, where the cell is in a human. M2 is useful for treating a patient infected with HSV. The present sequence represents murine BAD, which is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse; Bad-DTTR; apoptosis; cancer; spinal muscular atrophy; diphtheria toxin receptor binding domain; DTR; neoplasm; tumour; hyper-proliferation; Alzheimer's disease; neurodegenerative disorder; transient ischaemic neuronal injury; stroke; spinal cord injury;

```

```
Novel fusion protein for modifying apoptosis in target cell and reducing apoptosis after transient ischaemic neuronal injury, has two domains which targets protein to a cell and modifies apoptotic response of cell
```

Claim 4; Page 59-61; 65pp; English.

The sequence represents the amino acid sequence of Bad-DTTR apoptosismodifying fusion protein comprising Bad gene sequence fueed via a short
linker to diphtheria toxin translocation domain (DTTR). The
functional apoptosis-modifying fusion protein is capable of binding a
crarget cell and integrating into or crossing a cellular membrane of the
target cell. The apoptosis-modifying fusion protein comprises at least
two domains: the DTR domain, which modifies an apoptotic response
target cell and the BC1-XI domain, which modifies an apoptotic response
target cell and the BC1-XI domain, which modifies an apoptotic response
the target cell. The fusion protein is useful for modifying
thibiting or enhancing) apoptosis in a target cell, such as neuron,
lymphocyte, cancer, neoplasm, macrophage, epithelial, stem, tumour or
hyper-proliferative cell or an adipocyte. It is also useful for reducing
typoptosis in a subject after transient ischaemic neuronal injury,
apoptosis in a subject after transient ischaemic neuronal injury,
aspecially spinal cord injury. The fusion protein may be used to treat
various diseases and injury conditions through inhibition or enhancement
of apoptotic cellular response, including neurodegenerative disorders
such as Alzheimen's disease, Huntington's disease, spinal muscular
atrophy, stroke episodes and unrequiated cell growth as in tumours and
various cancers. The apoptosis-modifying fusion protein can be delivered
ceffectively throughout the body and targeted to selective tissue and

APPLICATION NUMBER: US/08/33,565
FILING DATE: 31-COT-1994
CLASSIFICATION NUMBER: 15726A-000700
TELECOMMUNICATION INFORMATION:
TELEPRONE: (415) 326-2440
TELEPRONE: (415) 326-240
TELEPRONE: MINDRER: LEGEN DING: 2: SEQUENCE CHARACTERISTICS:
LEMCTH: SALID amino acids
LEMCTH: SALID MOLECULE TYPE: protein FEATURE: NAME/KEY: Protein TYPE: amino acid STRANDEDNESS: sin linear RESULT 1 US-08-333-565-2

Query Match

100.0%; Score 138; DB 1; Length 204;
Best Local Similarity 100.0%; Pred. No. 5.8e-14;
Matches 26; Conservative 0; Mismatches 0; Indels 0 LOCATION: 1..204
CTHER INFORMATION: /note= "Deduced amino acid sequence CTHER INFORMATION: of mouse BAD."

A;Title: The homeotic gene APETALA3 of Arabidopsis thaliana encodes a MADS box and A;Reference number: A42095; MUID:92154682; PMID:1346756
A;Accession: A42095
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A.Description: aldehyde-lyase; carbon-carbon lyase
A.Pathway: aromatic amino acid blosynthesis; shikimate pathway
A.Note: first step in shikimate pathway
C.Superfamily: phospho-2-dehydro-3-deoxyheptonate aldolase
C.Keywords: aldehyde-lyase; aromatic amino acid blosynthesis; carbon-carbon lyase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Thuctional characterization of two splice variants of rat BAD and
their interaction with Bcl-w in sympathetic neurons.";
Mol. Cell. Neurosci. 17:97-106(2001).

Mol. Cell. Neurosci. 17:97-106(2001).

Dinding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level
of heterodimerization of these proteins with BAX. Can reverse the
death repressor activity of Bcl-x(L), but not that of Bcl-2 (By
similarity). Appears to act as a link between growth factor
creceptor signaling and the apoptotic pathways.

receptor signaling and the apoptotic pathways.

receptor signaling and the apoptotic pathways.

113/Ser-137 phosphorylated form binds ld-3-3 proteins, Bcl-
subcombinity noter mitochondrial membrane. Upon
phosphorylation, locates to the cytoplasm (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                        IsoId=05147-2; Sequence=VSP_000534;

-!- TISSUE SPECIFICITY: Expressed in all tissues tested, including brain, liver, spleen and heart. In the brain, restricted to epithelial cells of the choroid plexus. Isoform alpha is the more abundant form.

-!- DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.

-!- PTM: Phosphorylated on Ser-137 promotes heterodimerization with 14-3-3 profeins. This interaction then facilitates the phosphorylation at Ser-137 promotes heterodimerization to the release of Bcl-x(L) and the promotion of cell survival. Ser-137 is the major site of AKT/PKB phosphorylation, Ser-156 the major site of protein kinase A (CAPK) phosphorylation (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LPRPKSAGTATQMRQSASWTRIIQSWWDRNLGKGGSTPSQ

1. SUBCELLUIAR LOCATION: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm.

1. TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARETY OF TISSUES.

1. DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the Bcl-2 family.

2. PTM: Phosphorylation on Ser-79 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-118, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival.

2. Ser-99 is the major site of AKT/PKB phosphorylation, Ser-118 the major site of protein kinase A (CAPK) phosphorylation (by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         similarity).
-! SIMILARITY: Contains 1 Bcl-2 homology 3 (BH3) domain.
-! SIMILARITY: BELONGS TO THE BCL-2 FAMILY.
-!- CAUTION: Ref.1 sequence differs from that shown due to frameshifts in position 64 and 91.
                                                                                                                                                                                                             mitagenesis, and biophysical studies.";
Protein Sci. 9:2528-2534(2000).
-!-FUNCTION: Promotes cell death. Successfully competes for the binding to Bcl-x(L), Bcl-2 and Bcl-w, thereby affecting the level of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bcl-x(L), but not that of Bcl-2 (By similarity). Appears to act as a link between growth factor receptor signaling and the apoptotic pathways.
-!- SUBUNIT: Forms heterodimers with the anti-apoptotic proteins, Bcl-x(L), Bcl-2 and Bcl-w. Also binds protein Si00Al0 (By similarity). The Ser-75/Ser-99 phosphorylated form binds 14-3-3 proteins (By
STRUCTURE BY NMR OF 103-127.

-!- FUNCTION: STEREOSPECIFIC CONDENSATION OF PHOSPHOENOLDFRUVATE (PEP)
AND D-ERYTHROSE-4-PHOSPHATE (E4P) GIVING RISE TO 3-DEOXY-D-ARABINO-HEPTULOSONATE-7-PHOSPHATE (DAHP).
-!- CAPALYTIC ACTIVITY: 2-dehydro-3-deoxy-D-arabino-heptonate 7-phosphate + phosphate = phosphoenolpyruvate + D-erythrose 4-phosphate + H(2)O.
-!- ENZYME REGULATION: INHIBITED BY TYROSINE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PRT; 232 AA.

Nature 409:525-529 (2001).

-I-FUNCTION: Probable transcription factor involved in the genetic control of flower development. Is required for normal development of petals and stamens in the wild-type flower. Forms an heterodimer with PISTILIATA that is required for autoregulation of both AP3 and PI genes. AP3/PI heterodimer interacts with AP3/PI or SEPALLATA3 to form a ternary complex that could be responsible for the regulation of the genes involved in the flower
                                                                                                                                                                                                                 Krizek B.A., Meyerowitz E.M.;
